FDA Compliance Declaration

PTFE Films, PTFE Semi-Finished Products, and PTFE-Coated Glass Fabrics

We hereby confirm, based on the raw material and supplier documentation available to us, the compliance of our PTFE products as described below with the relevant provisions of the U.S. Code of Federal Regulations (FDA), Title 21.

1. Virgin PTFE – Non-Adhesive Films and Semi-Finished Products

The PTFE materials used consist of polytetrafluoroethylene based on tetrafluoroethylene homopolymer. The PTFE used complies with the applicable requirements of: **FDA 21 CFR § 177.1550 – Perfluorocarbon resins** for materials and articles intended for contact with food.

Compliance applies provided that the specifications, restrictions, and intended conditions of use set out in 21 CFR § 177.1550 are observed.

This declaration applies in particular to non-adhesive products made of virgin PTFE, such as:

- PTFE films
- PTFE sheets
- PTFE rods
- PTFE tubes
- other semi-finished products made of virgin PTFE

provided that they do not contain any additional components not covered by this declaration.

2. Virgin PTFE – Self-Adhesive Versions

For self-adhesive PTFE products, the surface intended for food contact consists of PTFE.
The applicable requirements of the following apply to this PTFE surface:
FDA 21 CFR § 177.1550 – Perfluorocarbon resins

The pressure-sensitive adhesive applied to the reverse side is expressly not part of this declaration of compliance.
The pressure-sensitive adhesive does not have food-contact compliance.
The self-adhesive side is therefore not intended for direct or intended contact with food**.
The FDA compliance statement applies exclusively to the PTFE side of the product.

3. PTFE-Coated Glass Fabric – Non-Adhesive

For PTFE-coated glass fabrics, the surface intended for food contact consists of a PTFE coating.
The PTFE used for the coating complies with the applicable requirements of: FDA 21 CFR § 177.1550 – Perfluorocarbon resins

The glass fabric serves as a mechanical substrate and is separated from the food-contact surface by the PTFE coating when used as intended.
The declaration of compliance therefore applies to the PTFE food-contact surface.

This declaration is subject to the PTFE coating remaining intact and the glass fabric substrate not coming into direct contact with food when used as intended.

4. PTFE-Coated Glass Fabric – Self-Adhesive

For self-adhesive PTFE glass fabric, the side intended for food contact consists of a PTFE coating.
The PTFE coating complies with the applicable requirements of:
FDA 21 CFR § 177.1550 – Perfluorocarbon resins.
The glass fabric serves as a mechanical substrate.
The pressure-sensitive adhesive applied to the reverse side is expressly not part of this declaration of compliance.

The pressure-sensitive adhesive does not have food-contact compliance.
The self-adhesive reverse side is therefore not intended for direct or intended contact with food.
The FDA compliance statement applies exclusively to the PTFE-coated food-contact side.

Restrictions and Notes

This declaration applies exclusively to the materials described above and their intended use.
For self-adhesive versions, the pressure-sensitive adhesive is generally excluded from the declaration of compliance.

This declaration does not automatically apply to:
- customer processing or additional coatings,
- subsequently applied adhesives,
- printing inks or markings,
- additional additives,
- processing-related contamination,
- damaged or worn PTFE surfaces,
- applications in which the pressure-sensitive adhesive may come into direct or indirect contact with food,
- applications in which glass fabric or other non-approved components come into contact with food.

The suitability of the finished product for a specific food application must be assessed by the user, taking into account the actual conditions of use, in particular temperature, contact time, type of food, and mechanical stress.

This declaration does not constitute individual approval of the product by the U.S. Food and Drug Administration. The designation "FDA approved" is therefore not used.**

This declaration relates exclusively to compliance with the applicable requirements of: 21 CFR § 177.1550 – Perfluorocarbon resins for the respective PTFE food-contact surface described.
